

Quantifying transportation access to help agencies make informed infrastructure investments.

Transportation projects will change community access, yet technical barriers in understanding access impacts often remain high. TrACKIT (Transportation Access and Connectivity Key Insights Tool) is a toolbox built for ArcGIS Pro that aims to lower this barrier, making rigorous access analysis attainable for any agency.

TrACKIT supports:

- **Automated Data Generation:** Uses OpenStreetMap (OSM) data for transportation networks and points of interest (POIs).
- **Customization:** Allows users to supplement OSM data as needed with custom POIs and network edits.
- **6 Modes:** Vehicle, Freight Truck (beta), Bicycle, Pedestrian, Low Stress Bicycle, Low Stress Pedestrian.
- **3 Access Metric Types:** Travel Shed Area, Cumulative, Dual.

How Does it Work?

TrACKIT does the “heavy lifting” for you so you can focus on the results.

1. Create Base Dataset:

Automatically download OpenStreetMap (OSM) data for the project area.

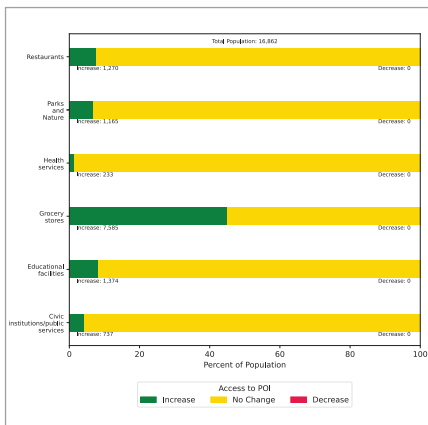

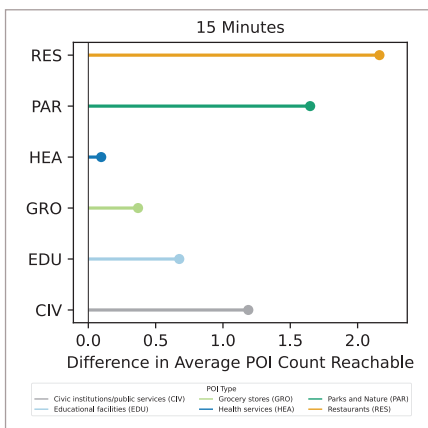

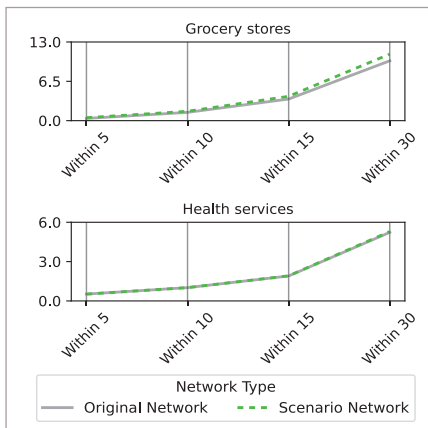

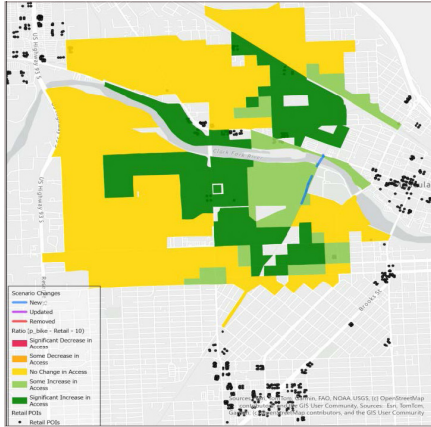

2. Test “What-If” Scenarios:

Use the toolbox to edit the network—adding, removing, or upgrading links—to represent your proposed infrastructure project.

3. Measure and Analyze:

Generate automated charts and maps that compare “Original” and “Scenario” conditions across six travel modes.

Chart Examples

Who is TrACKIT For?

- **State DOTs & MPOs:** Inform investment decisions with data-driven access analysis.
- **Consultants:** Deliver standardized access metrics that can apply to a variety of project types.
- **Staff with Modest GIS Skills:** Run automated network preparation and access analysis with ease.

Technical Requirements

TrACKIT runs on standard office hardware with no expensive extensions required.

- **Software:** Esri ArcGIS Pro v3.4+.
- **License:** Basic License is sufficient.
- **Hardware:** 16 GB RAM; ~25 GB disk space.

Developed by the U.S. DOT Volpe Center for the FHWA Office of Planning, Environment & Realty (HEP) to simplify transportation access analysis for a nationwide audience.
